

Indexabyte

Your disk, decoded. Find the files and folders taking up space. Even the hidden ones.

GETTING STARTED / MAC APP STORE EDITION

01 INSTALL & OPEN

Install Indexabyte from the Mac App Store, then open it from Applications. Requires macOS 14 or later.

02 CHOOSE & SCAN

Click CHOOSE to select a folder or disk and allow access. Click START SCAN. Hidden files and folders are included automatically.

03 EXPLORE & MATCH NAMES

Largest stays the default. FOLDERS also offers HIERARCHY. In FILES, DUPLICATES groups exact filename + extension matches. Contents may differ.

04 SAVE SCANS & STAR ITEMS

SAVE SCAN keeps all results in SAVED SCANS. Use a small star to keep a file or folder in REVIEW LATER. Both stay available after reopening the app.

05 EXPORT JUST ENOUGH

EXPORT offers compact CSVs and a one-page PDF. Enable Hide names and paths in the PDF save panel for a private report. Complete CSV can exceed Excel limits.

READ THE SIZES

FILE SIZE is the reported length.
ALLOCATED is reported disk space.
Cloud-only and sparse files can differ.
Nested folder totals overlap.

CHECK THE COVERAGE

macOS may protect some locations.
UNREADABLE explains gaps. Full Disk Access is optional; you still need to choose a folder or disk.

LOCAL ONLY / NO UPLOADS / ORIGINAL FILES UNTOUCHED

Saved scans show recorded sizes; Finder reveals today's files.
